WIRELESS AP Knowledge

Wired or Wireless Installation?

When to use wireless?

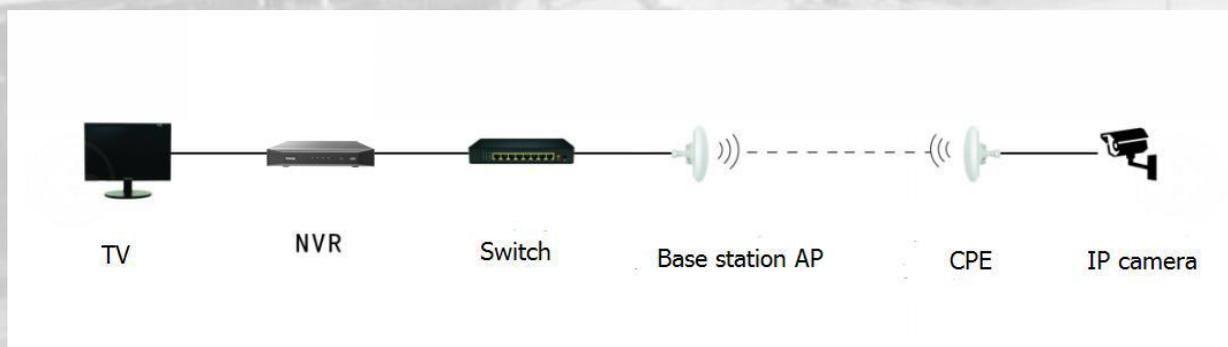

Wired CCTV Installation:

Wired installation is commonly used of CCTV installer mostly if they have a project for Analog Type Camera and IP Camera. They use some Cables like Coaxial and UTP Network Cable.

- **Need Cables & Protection(outdoor)**
- **Distance is around 100meters**

Wireless CCTV Installation:

Wireless installation is much effective for long distance video transmission using AP antenna. And also it can save more time, installation materials / labor cost, and more margins for projects

- **NO Cables, Line of Sight**
- **Distance is from up to 20km**

>> What is Wireless AP?

Galaxy®

Concept: Wireless is less wire, not NO-wire.

Access Point (AP) connects to devices (DVR or cameras) by wired Ethernet, and converts it to a 2.4Ghz or 5Ghz wireless signal. It sends and receives wireless data.

Usually the data receiver is directly called AP, while the data transmitter is called CPE (Customer Premises Equipment). All Access points products can be set as AP or CPE mode.
(Transmitters also known as senders)

Wireless AP Transmission Speed

The transmission rate is the highest transmission rate that can be achieved in theory. The data transmission bandwidth is the practical speed bps (bit per second) .

Highest rate: 300Mbps
Practical Bandwidth is 50M

Highest rate: 150Mbps Practical Bandwidth is 35M

2.4GHz/Outdoor CPE

»» How many IP Cameras you can transmit?

The IP cameras are connected with the CPE(Transmitter). The bandwidth of AP(Receiver) and the cameras decide how many cameras can be carried in one solution.

Bandwidth of wireless access point:

Frequency	Transmission Speed	Model	Transmission Distance	Total Bandwidth
5.8 GHz	150Mbps	GX-WAP1502	≤2km	30-60M
2.4 Ghz	300Mbps	GX-WAP3003	≤3km	40-60M
5.8GHz	300Mbps	GX-WAP3008	≤3km	40-60M

» IP Cameras bandwidth & Compression technology

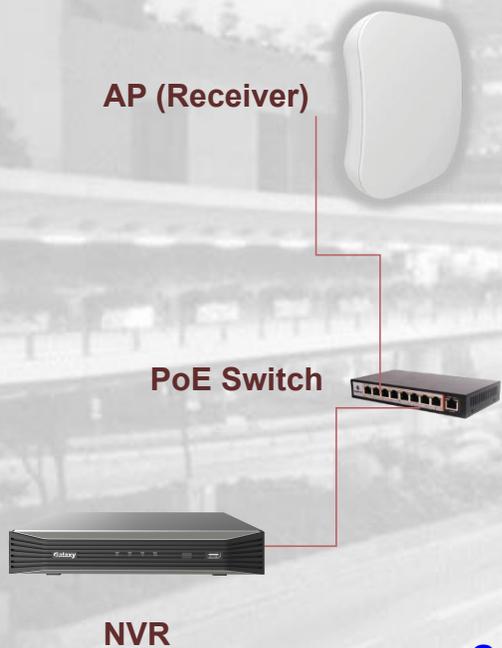

Bandwidth of camera: (Realistic bandwidth depends on Camera traffic – amount of motions)

H.264 Video Compression			H.265 Video Compression		
IP Camera	Megapixel	Bandwidth	IP Camera	Megapixel	Bandwidth
720P	0.92	1 - 3Mbps	1080P	2.07	1 - 4Mbps
960P	1.23	2 - 5Mbps	2K Res.	3.69	2 - 7Mbps
1080P	2.12	3 - 8Mbps	4K Res.	8.85	6 - 18Mbps
2K Res.	3.69	5 - 15Mbps	Galaxy Pro Ultra 265		
4K Res.	8.85	11 - 35Mbps	4K Res.	8.85	3 – 9Mbps

» How many IP Cameras you can transmit?

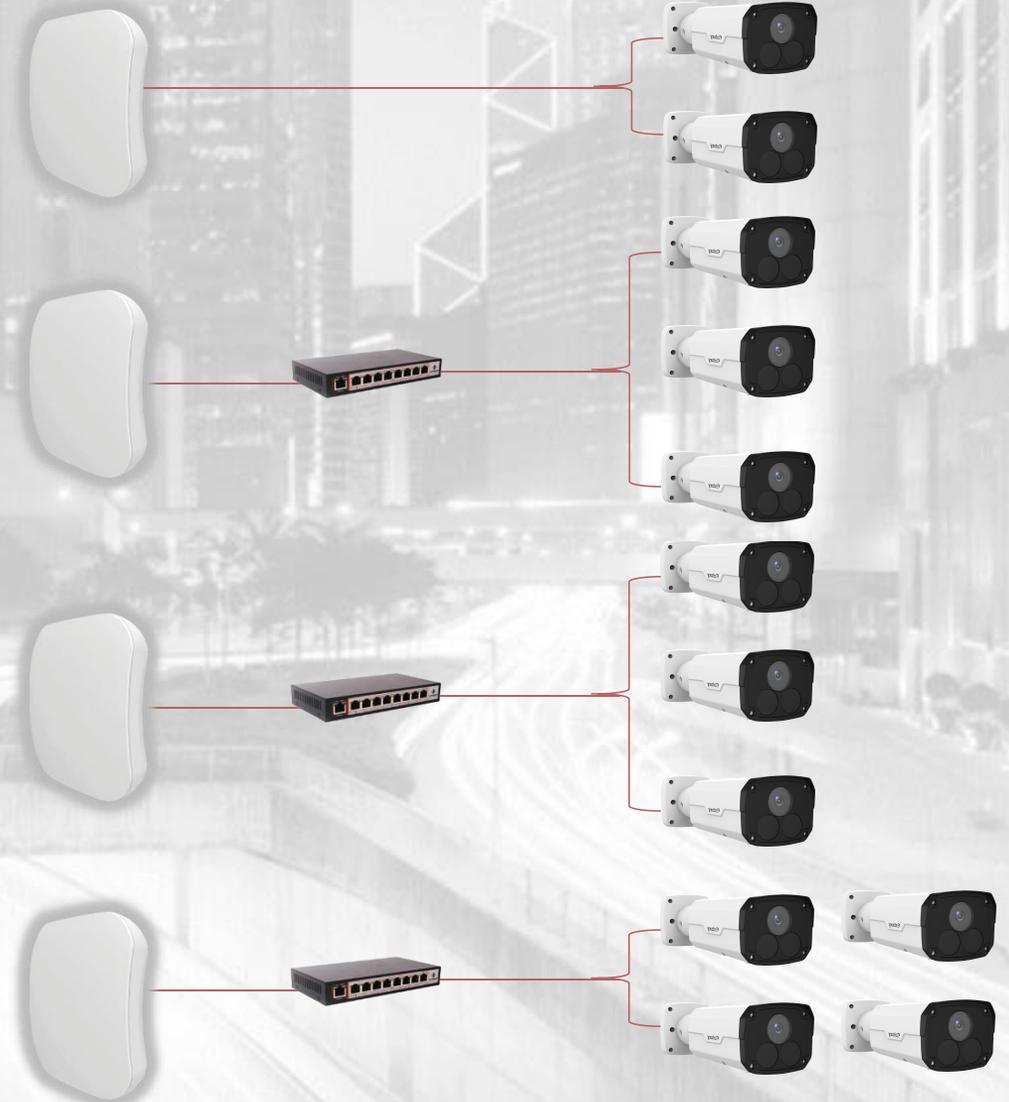

GX-WAP3008 / 5.8Ghz / 300Mbps speed
Maximum Bandwidth: 60M

CPE (Trans.)

PoE Switch

H.265 1080P / 3Mbps

20 units IPC x 3Mbps = 60Mbps
As long as not exceeding the
AP receiver bandwidth

>> The transmission angle of wireless AP

Galaxy®

Keep in mind:

The farther distance from AP, the greater the scope of coverage.
The smaller angle to the center of AP, the farther the transmission distance.

»» What is a DIP Access Point?

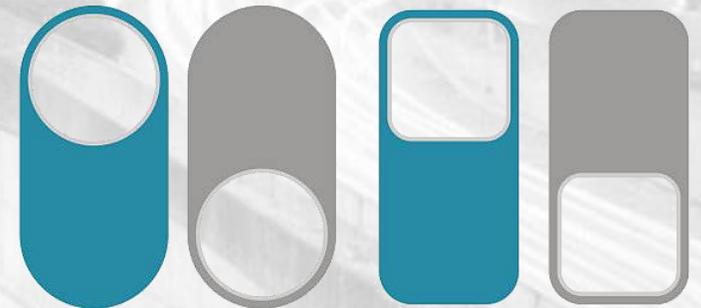

Galaxy®

The first DIP switch EZ Dial up Access point in the market. No computer web interface needed, no network knowledge needed, no professional guidance needed.

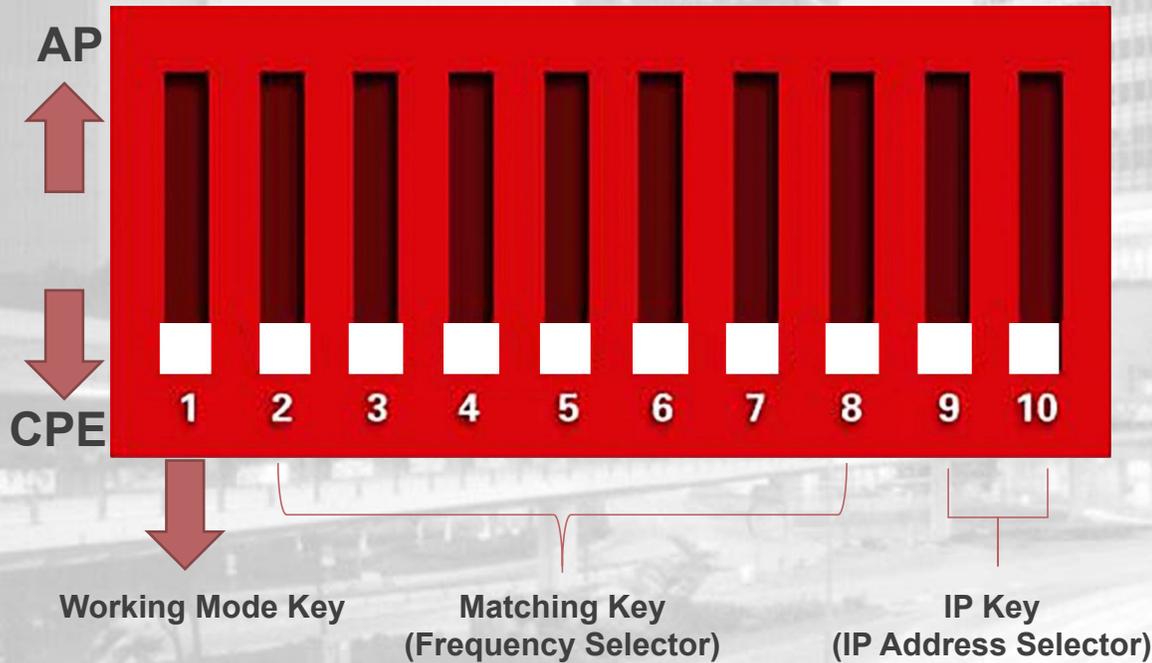

EZ Connection by simply flipping the Access point DIP to MATCH your devices!
DIPs Aps are specialized for **CCTV Video Transmission** compared to other AP brands in retail market that are applicable for mostly web browsing NETWORK Transmission.

DIP Access Point features :

- **Good Transmission Speed & Distance**
- **Stability in constant data transmission (low latency)**
- **Durability in commercial/industrial environment**
- **Low maintenance**
- **Weatherproof**

»» How the DIP Switch Works?

Switch 1 changes the mode of the device.
UP is Access point (AP) mode for using with your recorder, Router, etc..
DOWN is for using with your cameras & Wi-fi.

Switch 2 to 8 are for matching AP and CPE together.
Different combinations corresponds to different frequencies.

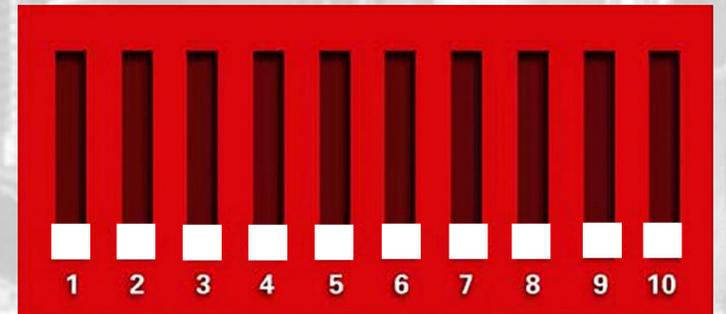

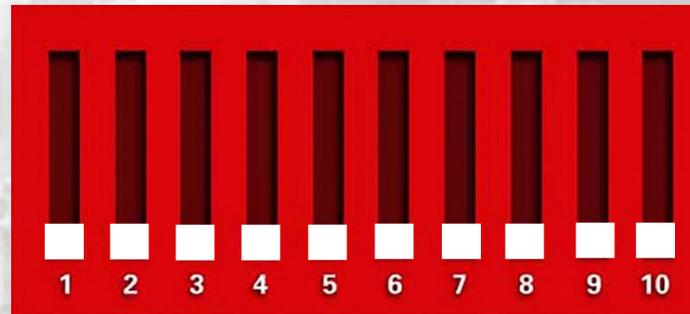

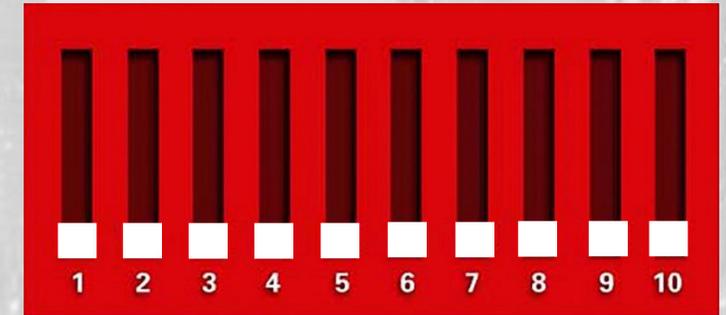

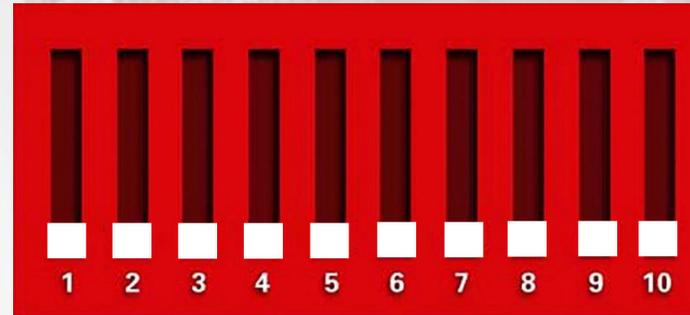

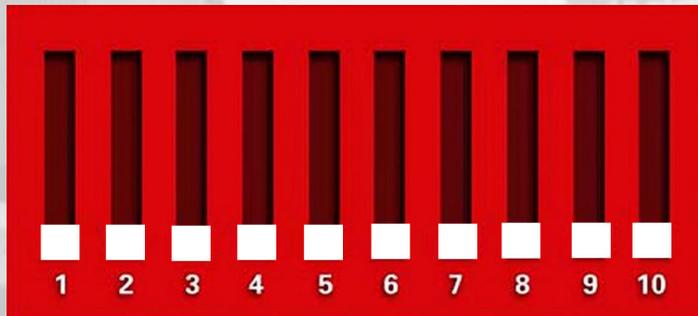

Switch 9 & 10 are for point to multi-point functionality.
To use up to 4 CPEs with one AP, different orders of button 9&10 stand for different CPE.

Each DIP AP(Receiver) can be connected up to 4 DIP CPE(Transmitters)

Sample DIP Setup of DIP1526-H

Galaxy®

Access Point

1. Setup the Working Mode of all APs.
2. Set the Frequency of AP (Receiver).
3. Follow the Frequency Pattern of AP (Receiver) in CPE (Transmitter).
4. Set the IP Keys of AP (Receiver) and CPE (Transmitter).
5. Follow the procedure in other AP (Receiver) & CPE (Transmitter) but in different Frequency Pattern.

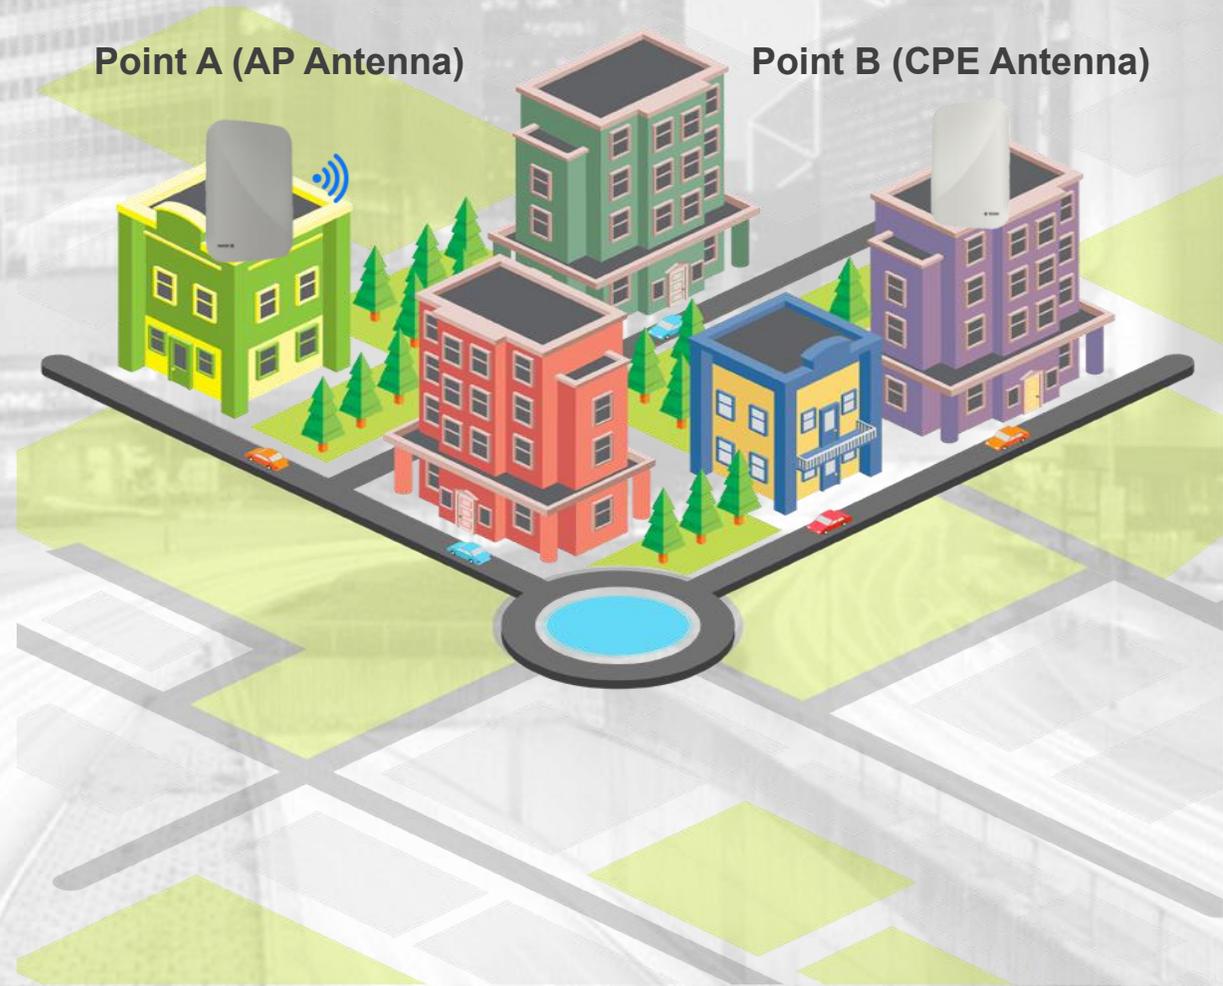

Wireless Transmission Mode

Galaxy®

Point-to-Point Transmission (PTP)

Point A (AP Antenna)

Point B (CPE Antenna)

Scenarios:
Between buildings for Cameras & Internet

➤➤ Wireless Transmission Mode

Galaxy®

Point-to-Multi Point Transmission (PTMP)

-The Point-to-Multipoint topology (also called star topology or simply P2MP) is a common network architecture for outdoor wireless networks to connect multiple locations to one single central location. In a point-to-multipoint wireless Ethernet network, all remote locations do not communicate directly with each other but have a single connection towards the center of the star network where one or more base station is typically located.

Wireless Transmission Mode

Galaxy®

Repeater / Access Point Mode

-A **wireless repeater** (also called **wireless range extender**) takes an existing signal from a wireless access point and rebroadcasts it to create a second network. When two or more hosts have to be connected with one and the distance is too long for a direct connection to be established, a wireless repeater is used to bridge the gap.

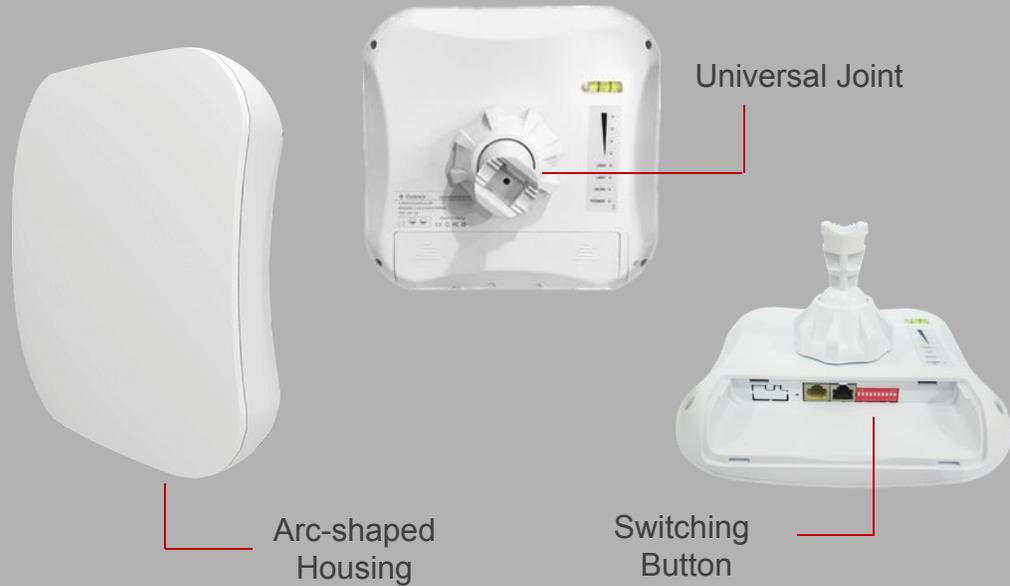

The image features a background of a city skyline with several tall skyscrapers. A large, semi-transparent red arrow points from the left towards the center. Overlaid on the right side of the image is the word "Galaxy" in a bold, red, sans-serif font, with a registered trademark symbol (®) to its upper right. A horizontal red band spans across the middle of the image, containing the text "Specification and Application" in white, bold, sans-serif font. The bottom portion of the image shows a highway with light trails from cars, suggesting motion and modern infrastructure.

The background of the slide is a grayscale photograph of a city street with tall buildings. A large, semi-transparent red arrow points from the left towards the center. The word "Galaxy" is written in a bold, red, sans-serif font in the upper right corner, with a registered trademark symbol (®) to its upper right.

Galaxy®

Installation & Cases

Competitive edge

Galaxy®

Conventional AP

1. Most application are for internet use
2. Limited on installation angles
3. Limited selections on product range
4. High cost on commercial grade products

Galaxy AP

1. Fashionable design & Industrial level performance
2. 360 °adjustable bracket for EZ installation
3. Wide applications for all markets
3. Specialized in CCTV projects, peace of mind
